FirstName1 LastName1, FirstName2 LastName2, FirstName3 LastName3
University of Here - University of There

Introduction

The `\journal` command must be completed with the appropriate volume and number information. The last two arguments of this command are the first and last page numbers, which allows the authors to paginate correctly.

The short title is used for the headers of even pages, the short version of the authors list is used for the headers of the odd pages. These short versions are defined by the `\command[short version]{full version}` command, where *commande* is respectively *title* or *author*. If the short version of one of these pieces of information is not defined, the full version is used instead. However, the text used for headers must not be too long (less than 80mm); if it is the case, the compilation of the document fails, with a reasonable error message (Kiefer *et al.*, 1999; Keenan, 1976).

The first paragraph of a (sub)section is not indented (Molinier & L evrier, 2000), the following are (Baptista & Ranchhod, 1998).

Lists look as follows:

- item 1
- item 2

1. Section

Introduction of the section, with a little linguistic example (Chaurand, 1999; De Gioia, 1994).

(1) *Examples are obligatorily in italics*

1.1. Sub-section

Introduction of the sub-section (Gross, 1981).

- (2) a. *Ceci est un exemple*
“This is an example”
b. **Ceci un exemple*
**This an example*

1.1.1. *Sub-sub-section*

Content of the sub-sub-section.
